In the event Developer uses the API to provide an APP that communicates with or distributes information regarding an individual, Developer shall notify CDK, in a manner reasonably directed by CDK, of any opt out requests relating thereto received by Developer.

Tip: For easy navigation, use the Bookmarks pane () in a PDF reader.

Document Edition History

Edition Date	Description
November 20 th , 2025	First edition of the guide for the API specivication v2..0.4.

Working with this API

CDK Drive Get Merchandisable Vehicles v2 lets you retrieve merchandisable vehicle data collected from multiple sources from participating dealerships. Make use of an extensive set of query parameters that enable you to filter and sort the response as needed.

WORKING WITH THIS GUIDE

This guide provides an overview of the methods in the API plus examples showing how to use them. The guide is divided into the following sections:

- **Working with this API** – A technical overview of the API and its features
- **API Reference** – Summary of the API methods and how to call them
- **Workflows** – Examples showing API method usage
- **Payload Details** – Descriptions of the payloads used by the API

Technical Overview

This API provides clients with merchandised inventory data gathered from participating dealerships.

The CDK Merchandisable Vehicle API combines the technical specifications in inventory with pricing, incentives, calculated payments, categorized features and options, and media (photos and video) to provide a fully merchandised view of each vehicle record.

Use Cases

Integrate this API into CDK Drive business processes with the use cases outlined below.

- Build automotive portal experiences with fully functional vehicle search results and Vehicle Details pages.
- Keep inventory data consistent and in-sync across multiple platforms.
- Build apps that use inventory pricing and incentives data to help customers optimize their inventories.

Using the API

This is a RESTful API where you structure requests to the service with the following components:

- **Method** – The *signature* of an API method is comprised of an HTTP method (like `POST`) plus a URL pointing to the resource targeted by the request.
- **HTTP headers** – All methods require the headers described in the *API Reference*.
- **Request body** – Where required, format a method's request body in JSON.

The *signature* of a method is roughly outlined below:

```
Method Signature = HTTP Method + URL of resource
{httpMethod} https://{serviceHost}/{servicePath}/{resourceEndpoint}
```

For details on configuring these components in the requests you make to the service, see the *API Reference*.

Prerequisites

You must have a Fortellis Developer Network account before you can make requests to this API. Once you have an account, sign in to the [Developer Network](#) and register an app that uses this API.

When you register an app, Fortellis assigns a set of authorization credentials and a Subscription ID to the app. Use these values to make requests to the API service.

Tip: For details on getting started with the Fortellis platform and making calls to Fortellis APIs, see [Getting Started](#).

API Reference

This *API Reference* gives an overview of the methods in the API and describes how to make calls to the **CDK Drive Get Merchandisable Vehicles v2** API.

API Method Summary

This table summarizes all the methods in the API. The table abbreviates the method URLs. To complete each, pre-pend the listed endpoint with the API's *service URL* (described below).

Method Names give unique names to each API method and are used throughout the guide. See the *Workflows* section for examples that show how to use these methods.

HTTP Method + Endpoint	Method Name / Description
GET /	vehicleSearchUsingGET Retrieves one or more vehicle merchandised inventory records, as specified by request filters.
GET /ping	ping Tests the connection between the API Provider and Fortellis.

Note: The API Specification is an OpenAPI file that acts as the contract between the API Publisher and the API user. Always refer to the declarations in the API specification in [API Directory](#) as the authoritative definition of the API.

The API Service URL

All method URLs in this API use the following *service URL*, which is a combination of the *host* followed by the *organization namespace* and *service base path*:

```
https://api.fortellis.io/cdk/sales/inventory/v2/merchandisable-vehicles
```

Fortellis HTTP Headers

In addition to the standard set of HTTP headers used to make a REST API request, this API uses a set of required Fortellis headers plus the additional standard HTTP headers documented below:

HTTP Header	Description
Subscription-Id	REQUIRED A valid Subscription ID assigned to the user of the app making the request. App Publishers can retrieve the Subscription-Id values for the users of their app programmatically, and through the app's Subscription Report on Developer Network.
Authorization	REQUIRED This header provides the authorization needed to make requests to the API. Call the Fortellis identity server using the client credentials flow to create an OAuth 2.0 access token. Set the value of this header to the word "Bearer" followed by a space and a valid access token. <i>Example: "Authorization: Bearer <tokenValue>"</i>
Request-Id	REQUIRED A client-supplied <i>globally unique identifier</i> (GUID) string value that is unique for each request. This value is returned in the response so you can correlate the response to the request.
Accept	Indicates the content type(s) the client understands, expressed as MIME types. Set: "Accept: application/json"
Accept-Charset	Indicates the character set(s) the client understands. Set: "Accept-Charset: UTF-8"
Accept-Language	Indicates the content the language(s) the client understands. <i>Valid values:</i> "en_US", "fr_CA", "es_MX", "en_CA", "en_AU", "en_NZ"
dealerCode	Sets the dealer code for the query. This can also be set with a query parameter. <i>Example: 5236a</i>

Authorizing Requests

This API requires you to pass a Fortellis OAuth access token in the **Authorization** header of each request made to the service. Use the [Client Credentials Flow](#) to generate a Bearer token using the credentials assigned to your Fortellis app. For more, see [Authorization on Fortellis](#).

Troubleshooting

Fortellis APIs issue required HTTP status and error codes as outlined in [RFC 7231](#).

If an error occurs during processing, the service returns an **errorCode** and a **message** associated with the error. Use the following tips to help troubleshoot errors.

HTTP Status Codes Returned

Code	Message	Description
200	OK	The request was successfully received and processed.
400	Bad Request	This is likely caused by a malformed request. While this error can be vague, start troubleshooting by ensuring your request syntax is valid.
401	Unauthorized: Access token is expired or invalid	This error indicates there is a problem with the authorization of the API request. Check the response payload for more information.
403	Forbidden	This error indicates there is likely a problem with the authorization of the API request. Check the response payload for more information.
404	Not Found	This error is likely due to a problem with the request URL used in your API request. Ensure your API endpoints are correctly formatted.
406	Not Acceptable	A query parameter contains an unacceptable value.
429	Too Many Requests (rate limiting)	Issued when your API call use exceeds the subscribed rate limit. Make sure you are not making unnecessary calls to the server and examine your API call limits.
500	Internal Server Error	An error occurred when the API server was processing your request. Wait a bit and retry the request. If the problem persists, contact <i>API Support</i> as listed in API Directory.
502	Bad Gateway	The API gateway could not be found. Ensure the API host is correct in your requests.
503	Service Unavailable	The API service could not be found. Make sure your API host, basepath, and method paths are correct in your calls to the service.
504	Gateway Timeout	The API gateway timed out waiting for a response from the server. Wait a bit and retry the request. If the problem persists, contact <i>API Support</i> as listed in API Directory.

Workflows

These workflows show how call the **CDK Drive Get Merchandisable Vehicles v2** API in your business processes.

The vehicleSearchUsingGET Method

Call **GET** / by setting the required HTTP headers with the endpoint and adding the query parameters to filter the response as needed.

The vehicleSearchUsingGET Request

This method supports a full set of query parameter that lets you retrieve a variety of different merchandisable vehicle record sets.

The workflows presented below show how to configure queries to perform targeted searches. These include:

- Search by the dealer's **webId**
- Search for recently updated vehicle records
- Control the pagination of the search results
- Search for records by the **operationType**

Refining the Search with Query Parameters

The records returned by *vehicleSearchUsingGET* are filtered by the query parameters you specify with your call. Responses can be narrowed to a specific vehicle record or can include hundreds of matching records.

The data returned by your searches is limited to the dealer-inventory data associated with the Fortellis app subscription.

Query Parameters Table

Attribute	Value	Description
bodycolor	str	Exterior color of the vehicle.
bodyStyle	str	Vehicle's body style. <i>Examples:</i> • 4 Dr Sedan • 4D Sport Utility
bodyStyleClassification	str	Classification of the vehicle's body style. <i>Examples:</i> CARS or TRUCKS

bodyType	enum	Body type of the vehicle. <i>Valid values include:</i> • CAR • TRUCK • SUV • VAN • WAGON • CARGO VAN • COMMERCIAL VEHICLE
coordinates	str	The geo-coordinates [lat, lon]. Separate the latitude and longitude values with a comma. <i>Example: 48,-89 (read as read as 'lat=48 ', 'lon=-89').</i>
customerReserved	bool	If true, the vehicle is on a customer hold.
cylinders	int	Number of cylinders in the engine.
dealerCode	str	REQUIRED IF dealerType or the dealerCode header are not specified. The CDK DMS dealer code. <i>Example: 5236a</i>
dealerType	str	REQUIRED IF dealerCode is not specified. Dealer's type in the DMS. <i>Examples: WEB or Inventory</i>
displacement	f.l	Vehicle's engine displacement. <i>Examples: 3.5 or 2.0</i>
deleted	bool	If true, the search includes vehicles with a status of deleted.
displayableInventoryStatus	str	Vehicle display status. <i>Examples: In Stock, In Transit, Hold, and On Order</i>
drivetrain	str	Vehicle's drivetrain type. <i>Examples: RWD, AWD</i>
engine	str	Description of the vehicle's engine. <i>Example: 3.5L V6</i>
fields	str	Partial response field filter.

fuelType	enum	Vehicle's fuel type. <i>Valid values include:</i> Compressed Natural Gas Diesel Electric Ethanol Flexible Fuel Gas Hybrid Methanol Propane
id	str	<i>REQUIRED IF</i> other parameters are not specified. The vehicle's DMS ID.
includeAllPrices	bool	When set to true, this flag indicates the results include all available financial details for the vehicle. These details include the invoice number, vehicle date, total cost, holdback amount, lien balance, and other pricing details. <i>Note:</i> The response omits the <code>financials</code> section of the record if the data was not provided for the vehicle.
interiorColor	str	Vehicle's interior color.
limit	int	The number of search results to return. <i>Default:</i> 10
locale	str	The location of the vehicle. This parameter should be combined with other input attributes to narrow the field of search.
lotAgeRange	int	Time the vehicle has been in the lot. Specify a range of days separated by a colon (:). <i>Example:</i> 50:250 (between 50 to 250 days)
make	str	Vehicle's make. <i>Examples:</i> Lexus or Nissan
marketable	bool	When set to true, this flag indicates the status of the vehicle is "marketable".
maxLotAge	int	Vehicle's maximum lot age in days. <i>Example:</i> 250
maxMileage	int	Vehicle's maximum mileage range, in miles. <i>Example:</i> 350
maxMpg	int	Vehicle's maximum miles per gallon (MPG).
maxPrice	int	Vehicle's maximum selling price. <i>Example:</i> 35000
maxSavings	int	Maximum savings on the vehicle. <i>Example:</i> 12750

maxYear	int	Vehicle's maximum year. <i>Example: 2018</i>
merchandisablePaymentRange	int	Specifies a payment range. <i>Format: Separate the dates in the range with a colon (:).</i>
merchandisablePaymentType	enum	REQUIRED IF <i>merchandisablePaymentRange</i> is set. <i>Valid values: FINANCE or LEASE.</i>
mileageRange	str	The mileage range. To specify the mileage range, separate the beginning and ending mileages of the range with a colon (:). <i>Example: 10000:50000</i> (Read as "between 10,000 and 50,000.")
minLotAge	int	Vehicle's minimum lot age in days.
minMileage	int	Vehicle's minimum range, in miles.
minMpg	int	Vehicle's minimum MPG.
minPrice	int	Vehicle's minimum price.
minSavings	int	Minimum savings on the vehicle.
minYear	int	Vehicle's minimum year. <i>Example: 2020</i>
model	str	Vehicle's model. <i>Example: Altima, or Camaro</i>
modelCode	str	A comma-separated list of vehicle OEM model codes. This list creates string of terms used with the search. The search strings used must be exact matches of valid codes.
modelCodeOperationType	enum	An optional parameter used with modelCode searches. Populate this parameter with one of following: - containsAny (matches any value) - doesNotContainAny (does match any)
modelId	str	Vehicle's OEM model code. <i>Example: 32659</i>
modifiedTimeRange	date	Vehicles modified date range. Specify two dates between which you want to retrieve all the vehicles that have been modified. To specify the date range, separate the beginning and ending dates of the range with a colon (:). <i>Format: YYYY-MM-ddT hh:mm:ss.sssZ</i> <i>Example: modifiedTimeRange=2019-04-29T 12:00:00.000Z:2019-05-08T14:00:00.000Z</i>
mpgRange	str	The range of mileage-per-gallon. Specify the vehicle's MPG range with values separated by a colon (:). <i>Example: 27:31 (a range between 27 and 31 MPG)</i>

noOfCylinders	int	The number of cylinders in the vehicle's engine.
offset	int	Optional offset value to indicate which record to return first from the result set. For example, specify 100 to return the hundred record from the search results. <i>Default: 0</i> See: Setting the Offset Parameter .
option	str	A comma separated list of options to include with the vehicle. <i>Example: Back-Up Camera, Leather Seats</i>
optionCode	str	A comma-separated list of option codes to use in vehicle searches. To return results, searches must have an exact match with the provided codes.
optionCodeOperationType	enum	An optional parameter to use with optionCode searches. Populate this parameter with one of following: - containsAny (matches any value) - doesNotContainAny (does not match any value) - containsAll (matches all provided values) - isEmpty (optionCode is null or does not exist)
priceRange	str	The vehicle's price range. Specify price values separated by a colon (:). <i>Example: 25500:29995</i>
promotionAvailable	bool	When set to true, this flag indicates the vehicle has listed promotions.
promotions	bool	When set to true, this flag indicates the vehicle has listed promotions.
radius	int	The distance of the search radius from the locale and coordinates or the specified Zip code, measured in kilometers or miles. Use this attribute in conjunction with either the coordinates , zip , or zipCode parameters. If you specify radius and its associated parameters, you should not specify values for locale or region . <i>Example: 100</i>
region	str	The region in which the vehicle is located.
savingsRange	str	The savings range specified on the vehicle. Specify the vehicle's saving range with the two values separated by a colon (:). <i>Example: 2000:5000</i>

search	str	The category of the vehicle search. <i>Valid values include:</i> • new • certified • used • demo
searchQuery	str	An open-string contextual search using the vehicle's type, make, model, and so on. <i>Example:</i> 2019 Chevy Camaro
sort	str	The attribute on which you want the results sorted. <i>Note:</i> You cannot sort on all response attributes. For details, see: Sorting Data .
status	str	Vehicle's status. <i>Examples:</i> In-stock, In-transit, Hold, and On-order
stockNumber	str	A comma-separated list of stock numbers used to identify the vehicle. The list can contain complete or partial search terms.
stockNumberOperationType	enum	An optional parameter used with stockNumber searches. Populate this parameter with one of following: • containsAny (matches any value) • doesNotContainAny (does not match any value) • equals (exact match on any complete value) • startsWith (match starts with any partial value) • endsWith (match ends with any partial value)
stockOrVIN	str	A comma-separated list of partial or complete search string terms. Each individual term can match in either a stockNumber or vin attribute, both, or neither. Results are returned for the combined matches of all terms.
styleId	str	Vehicles's DK style ID. <i>Example:</i> 236541
transmission	str	Vehicle's transmission type. <i>Examples:</i> Automatic, Continuous
trim	str	Vehicle's trim level.
vehicleId	str	Vehicle's DMS ID number. This may or may not equal the VIN.
vehicleOwner	bool	If true, the customer is the vehicle's owner.

vehicleUse	str	Vehicle's primary use. <i>Examples: demo, loaner</i>
video	bool	If true, the vehicle's DMS record contains videos.
vin	str	The <i>vehicle identification number</i> , or VIN.
vsrPackageFilter	str	A comma separated list of the vehicle's package options. <i>Example: Moonroof, Driver Assistance</i>
webnum	str	Dealer's unique ID on the CDK website. <i>Example: 2235968</i>
year	int	Vehicle's make year.
yearRange	str	The vehicle's search year range. Specify year values separated by a colon (:). <i>Example: 2015:2018</i>
zip	str	Same as zipCode .
zipCode	str	REQUIRED IF other location identifiers are absent. The Zip or Postal Code of the vehicles location.

Note: An error is not generated if you populate a parameter with the value "ALL" (case insensitive). However, the value "ALL" is later stripped out of the search request and the parameter is ignored during processing.

Setting the Offset Parameter

The service returns a maximum of 100 records per request and you must iterate over the records to gather a result set that contains more than 100 records.

For example, if you know the result set contains 250 vehicles, you need 3 separate calls to cover the range. Change the **offset** by 100 in each call, making the offsets: 0, 100, and 200 (offset=0, offset=100, and offset=200). This fetches records 0-99, 100-199, and 200-249, respectively.

Sorting Data

By default, search results are sorted in ascending order by the vehicle's **createdDate** value, which is equivalent to setting **sort** to `createdDate|asc`.

Customize the sort by setting the **sort** query parameter to any of the sort-enabled fields listed in the table below.

SORT-ENABLED QUERY PARAMETERS

bodyColor	csStoreId	displayableStoreId (siteStoreId)	distance
emileage (specify a range)	exterior (color)	featuredPrice (specify a range)	hwyMpg (specify a range)
loggedIn_sortId	lotAge (specify a range)	make	model
mpg (specify a range)	price (specify a range)	salePric	savings (specify a range)
sortId	storeId (ownerStoreId)	year (specify a range)	

Search by Dealer webId

To retrieve vehicles of a given Dealer, search by the dealer's **webId**.

The response is provided in a paginated result set. By default, the service returns 10 vehicle results from the result set, but you can configure the request to return up to a maximum of 100 records with a single request. Refer pagination sample for examples on how to use paginated requests.

Query Parameter	Description
webId	Dealer's unique ID on the CDK website. <i>Example:</i> webId=motp-whiteallenhonda-cdkinv

Tip: Many of the attribute values used in the example calls are test values and will likely result in errors if you use them in your own test requests.

EXAMPLE SEARCH BY WEBID

```
// vehicleSearchUsingGET - request example

curl -X GET
  "https://api.fortellis.io/cdk/sales/inventory/v2/merchandisable-vehicles\
?webId=motp-whiteallenhonda-cdkinv" \
  -H 'Authorization: Bearer <token>' \
  -H 'Subscription-Id: <subscriptionId>' \
  -H 'Request-Id: <requestId>' \
  -H 'Accept: application/json'
```

Search for Recently Modified Vehicles

Use this type of search to retrieve vehicles that have been recently updated. Use the **timeRange** parameter to retrieve details about vehicle records that have been updated between specified dates.

Query Parameter	Description
modifiedTimeRange	Specify the dates using a UTC-formatted timestamp and separate the two dates with a colon (:). The following example returns all the vehicles modified between the specified date time range. <i>Example:</i> modifiedTimeRange=2019-04-29T12:00:00.000Z:2019-05-08T14:00:00.000Z
webId	Needed for the request, the dealer's unique ID on the CDK website. <i>Example:</i> webId=motp-whiteallenhonda-cdkinv

Search for Deleted Vehicle Records

Use the **deleted** parameter to retrieve details about vehicles that have been recently deleted.

Query Parameter	Description
deleted	Set this Boolean query parameter to <code>true</code> to retrieve vehicle records with a deleted status. <i>Example:</i> deleted=true <i>Default:</i> false
webId	Needed for the request, the dealer's unique ID on the CDK website. <i>Example:</i> webId=motp-whiteallenhonda-cdkinv

Searching by Operation Types

The searches you perform using **optionCode**, **modelCode**, and **stockNumber** can be extended using an associated **OptionType** query parameter that's provided with each of these main search options.

The following query parameters extend the searches you make with the associated search types:

- **optionCodeOperationType**
- **modelCodeOperationType**
- **stockNumberOperationType**

The filtering options available with each of these added query parameters are classified into *operation types*, and the three added parameters each use their own set of operation types.

Below are the set of operation types you can use with **optionCodeOperationType**, **modelCodeOperationType**, and **stockNumberOperationType**:

equals – Accepts one or more comma-separated values, and the response set contains all vehicles with the requested field that have an exact match on any one of the specified values. Use the option type for only exact-match **stockNumber** searches.

containsAny – Accepts one or more comma-separated values, and the response set contains all vehicles with the requested field that “contains any of” or “matches any of” of the specified values. Use this option type with **optionCode** and **modelCode** exact matches, and with partial **stockNumber** matches.

containsAll – Accepts one or more comma-separated values, and the response set contains all vehicles with the requested field that have the requested field that “contains all of” or “match all of” of the specified values. Use this option type with **optionCode** and **modelCode** exact matches, and with partial **stockNumber** matches.

doesNotContainAny – Accepts one or more comma-separated values, and the response set contains all vehicles with the requested field that have the requested field that “does not contain any of” or “does not match any of” the specified values. Use this option type with **optionCode** and **modelCode** exact matches, and with partial **stockNumber** matches.

startsWith – Accepts one or more comma-separated values, and the response set contains all vehicles with the requested field where the field “starts with” any of the specified values. Use with partial **stockNumber** match searches.

endsWith – Accepts one or more comma-separated values, and the response set contains all vehicles with the requested field where the field “ends with” any of the specified values. Use with partial **stockNumber** matches.

isEmpty – Accepts any non-blank string value, and returns all vehicles that have the requested field set to any of the following:

- null
- An Elasticsearch index that points to a null field value
- The specified field does not exist in the vehicle’s record

You can set **operationType** to **isEmpty** to search using any of the fields in the vehicle record.

Note that MVS2 ignores search field parameters that do not specify a value, and **operationType** = **isEmpty** requests should also specify a non-blank value, (such as **isEmpty**) in the field parameter value. For example, set the following:

- `optionCode=isEmpty`
- `optionCodeOperationType=isEmpty`

The value in the field parameter is not used for this **operationType**, so any non-blank value is valid, as long as it is URL safe and friendly.

The following table lists the search fields available with **operationTypes** searches:

Search Field	Description
optionCodeOptionType	You can use these filters: containsAny, containsAll, doesNotContainAny, isEmpty. <i>Examples:</i> • optionCode=ZZ1,WX,BK • optionCodeOperationType=containsAll
modelCodeOptionType	You can use these filters: containsAny, containsAll, doesNotContainAny, isEmpty <i>Example:</i> • modelCode=CV3F9NKNW, CV2F3NJW, RW2H9NKNW • modelCodeOperationType=doesNotContainAny
stockNumberOptionType	You can use these filters: containsAny, containsAll, doesNotContainAny, startsWith, endsWith, isEmpty <i>Examples:</i> • stockNumber=415, 430 • stockNumberOperationType=endsWith

The examples below show how to configure these query parameters:

- **optionCode**
- **modelCode**
- **stockNumber**

Example Using optionCode

```
// vehicleSearchUsingGET - request example

curl -X GET
  "https://api.fortellis.io/cdk/sales/inventory/v2/merchandisable-vehicles\
?optionCode=ZZ1,WX,BK\
&optionCodeOperationType=containsAll\
&webId=motp-bosakmichigancity-honda-cdkinv\
&locale=en_US\
&limit=100" \
  -H 'Authorization: Bearer <token>' \
  -H 'Subscription-Id: <subscriptionId>' \
  -H 'Request-Id: <requestId>' \
  -H 'Accept: application/json'
```

Example Using modelCode

```
// vehicleSearchUsingGET - request example

curl -X GET
  "https://api.fortellis.io/cdk/sales/inventory/v2/merchandisable-vehicles\
?modelCode=CV3F9NKNW,CV2F3NJW,RW2H9NKNW\
&modelCodeOperationType=doesNotContainAny\
&webId=motp-bosakmichigancity-honda-cdkinv\
&locale=en_US\
&limit=100" \
  -H 'Authorization: Bearer <token>' \
  -H 'Subscription-Id: <subscriptionId>' \
  -H 'Request-Id: <requestId>' \
  -H 'Accept: application/json'
```

Example Using stockNumber

```
// vehicleSearchUsingGET - request example

curl -X GET
  "https://api.fortellis.io/cdk/sales/inventory/v2/merchandisable-vehicles\
?stockNumber=415,430\
&stockNumberOperationType=endsWith\
&webId=motp-bosakmichigancity-honda-cdkinv\
&locale=en_US\
&limit=100" \
  -H 'Authorization: Bearer <token>' \
  -H 'Subscription-Id: <subscriptionId>' \
  -H 'Request-Id: <requestId>' \
  -H 'Accept: application/json'
```

Paginating Search Results

The complete response (the *response set*) is returned in *result pages* that can contain up to 100 responses per page. You page through the entire set to select the records you want returned.

By default, the service returns 10 vehicle records from the result set, but you can configure the request to return up to a maximum of 100 records with a call using the **limit** and **offset** parameters.

Refer to the pagination example below to see how to paginate requests.

Query Parameter	Description
webId	Needed for the request, the dealer's unique ID on the CDK website. <i>Example:</i> webId=motp-whiteallenhonda-cdkinv
limit	The maximum number of vehicle records to return on a page from the search results. <i>Example:</i> limit=15 <i>Default:</i> 10 <i>Max:</i> 100
offset	This parameter sets the offset for the record to return. Use this parameter to page through the result set using consecutive GET requests. <i>Default:</i> 0 <i>Example:</i> offset=30

EXAMPLE USING A PAGINATED RESPONSE

```
// vehicleSearchUsingGET - request example

curl -X GET
  "https://api.fortellis.io/cdk/sales/inventory/v2/merchandisable-vehicles\
?webId=motp-whiteallenhonda-cdkinv\
&locale=en_US\
&limit=20
&offset=40" \
  -H 'Authorization: Bearer <token>' \
  -H 'Subscription-Id: <subscriptionId>' \
  -H 'Request-Id: <requestId>' \
  -H 'Accept: application/json'
```

The above request returns 20 records (set with the **limit** parameter), starting from record number 40 (set with the **offset** parameter). Using the same **limit** setting, this would be the third page of results.

The vehicleSearchUsingGET Response

In response to a successful request, GET / returns 200 - OK with a payload containing one or more merchandisable vehicle records.

For details, see:

- [Merchandisable Vehicle Attributes](#) for attribute descriptions.
- [Merchandisable Vehicle Record Schema](#) for the complete record schema.
- [Example Merchandisable Vehicle Response](#) for a 3,500 line example describing a lot of vehicles.

Payload Details

CDK Drive Get Merchandisable Vehicles v2 uses the attributes described below in its request and response payloads.

ATTRIBUTE VALUES

All payloads in this API are formatted in [JSON](#). While not directly shown in the JSON, this API expects and returns specific data types in its attribute values.

In attribute tables, **Type** lists the data type used by an attribute, coded as follows:

- **str** – A string value.
- **int** – An integer value.
- **f.n** – A float value with *n* number of digits.
- **enum** – A string value that uses a declared set of named constant values.
- **bool** – A Boolean flag with a value of `true` or `false`.
- **date** – An ISO 8601 encoded date/time value. Example formats:
 - `YYYY-MM-DD`
 - `YYYY-MM-DDThh:mm:ss`
 - `YYYY-MM-DDThh:mm:ss.sssZ`
- **time** – an ISO 8601 encoded time value, for example: `hh:mm:ss`
- **array** – A list of elements.
- **obj** – An object type.
- **uuid || guid** – A 36-character *universally unique identifier* or *globally unique identifier* containing numbers, letters, and dashes.

Merchandisable Vehicle Attributes

This table shows the top-level attributes in a merchandisable vehicle record.

Attribute	Type	Description
filters	<i>array</i>	Describes the filters applied to the results. See: The filters Array .
metadata	obj	Metadata associated with the result set. See: The metadata Object .
results	<i>array</i>	The results. See: The results Array .
summary	obj	Summary of the result pagination. See: The summary Object .

The filters Array

Attribute	Type	Description
filters[].	<i>array</i>	Contains a list of filter objects.
key	<i>str</i>	Filter key to be used in searches.
label	<i>str</i>	Filter label.
multipleSelect	<i>bool</i>	If true, the filter can be searched with multiple values.
totalCount	<i>int</i>	Total count of filters. <i>Future feature.</i>
type	<i>str</i>	The filter selection type can be: • <i>range</i> • <i>multipleSelect</i>
value	<i>str</i>	Search/sort criteria value to be passed. <i>Example: salePrice desc</i>
range	obj	Defines the range for the filter.
range. max	<i>str</i>	Maximum range value for the merchandisable vehicles. Used for price and mileage,mpg type filters. <i>Example:</i> Price range max in dealer inventory: 87000.
range. min	<i>str</i>	Maximum range value for the merchandisable vehicles. Used for price and mileage,mpg type filters. <i>Example:</i> Price range min in dealer inventory: 2500.
range. selectedMax	<i>str</i>	Search query parameter specifies the maximum value for range filters. <i>Example: Price range max is: 87000.</i>
range. selectedMin	<i>str</i>	Search query parameter specifies the minimum value for range filters. <i>Example: Price range min is: 5000.</i>
range. step	<i>str</i>	Incremental step used. <i>Example: 5000,10000</i>
values[].	<i>array</i>	The search filter values.
values[]. count	<i>int</i>	Count of the filter type. <i>Future feature.</i>
values[]. isSelected	<i>bool</i>	If true, the filter value is selected is use in the query search.
values[]. label	<i>str</i>	The filter type's label. <i>Future feature.</i>

values[]. name	str	Name of the filter type. <i>Future feature.</i>
values[]. range	obj	Search filter range.
values[].range. max	str	Maximum range value. for the vehicles. Used for price and mileage,mpg type filters.
values[].range. min	str	Maximum range value for the vehicles. Used for price and mileage,mpg type filters.
values[].range. selectedMax	str	Search query parameter specifying the maximum value for range filters.
values[].range. selectedMin	str	Search query parameter specifying the minimum value for range filters.
values[].range. step	str	Incremental step used.

The metadata Object

Attributes	Type	Description
metadata.	obj	Contains metadata about the record.
disclaimers[]	<i>array</i>	List of standard disclaimers related to the vehicle, for items like prices, payments, features, and so on.
disclaime[]rs. text	str	Disclaimer text.
disclaimers[]. type	str	Disclaimer type.
sortOptions[]	<i>array</i>	List of sort options available on the results.
sortOptions[]. key	str	Sort option key.
sortOptions[]. label	str	Sort option label that is displayed on websites.
sortOptions[]. selected	bool	If true, sort parameter(s) are passed.
sortOptions[]. value	str	Sort option value. This needs to be passed as a sort parameter value.

The results Array

Attribute	Type	Description
results[].	<i>array</i>	Contains a list of vehicle records.
acquisitionType	<i>str</i>	Type of acquisition.
algDataProviderCode	<i>str</i>	ALG code (provided by Chrome).
bodyStyleClassification	<i>str</i>	Dealer-customized label for the body style classification.
bodyStyleDescription	<i>str</i>	Body description provided by the dealer.
bodyType	<i>str</i>	Vehicle body type.
category	<i>str</i>	Vehicle category.
color	obj	Vehicle Color details. See: The results.color Object .
createdDate	<i>str</i>	Date the vehicle record was created.
customerReservation	obj	Defines the customer reservation specifics.
customerReservateion. date	<i>date</i>	The timestamp of vehicle reservation. <i>Format: YYYY-MM-DDThh:mm:ss.sssZ</i>
customerReservateion. id	<i>str</i>	The unique identifier for tracking this change in reservation status for a vehicle.
customerReservateion. source	<i>str</i>	If present, identifies the system that submitted the reservation request.
customerReserved	<i>bool</i>	If <i>true</i> , the vehicle has been placed on hold for a specific customer.
dealerInfo	obj	Dealer contact details, where this vehicle is available. See: The results.dealerInfo Object .
deleted	<i>bool</i>	Flag indicates Vehicle is available or deleted.
description	<i>str</i>	Marketing description of vehicle.
disclaimers[]	<i>array</i>	Standard disclaimers applicable to vehicle
disclaimers[]. displayableText	<i>str</i>	Displayable disclaimer text.
disclaimers[]. text	<i>str</i>	Disclaimer text.
disclaimers[]. type	<i>str</i>	Type of disclaimer.
displayableOnWebsites	<i>bool</i>	If <i>true</i> , Vehicle notes can be displayable on websites.
displayableWebId	<i>str</i>	CDK website identifier where vehicle is displayed.
displayableWebIdLocale	obj	Displayable WebId locale. See: The results.displayableWebIdLocale Object .

distance	obj	Distance between the vehicle availability and the dealer location.
distance. unit	str	Distance unit. Either <code>mi</code> or <code>km</code> .
distance.value	f.l	Distance value.
doors	int	Number of doors on the vehicle.
drivetrain	str	The drivetrain of the vehicle.
engine	obj	The vehicle engine details. See The results.engine Object .
exactMatch	bool	If <code>true</code> , the vehicle is an exact match of the search term used in the query. This field is only returned when searchQuery was passed.
featureOptions[]	array	Collection of normalized feature values.
featureOptions[]. key	str	The <i>key</i> value for the option.
featureOptions[]. value	str	The value for the option.
featureSpecs[]	array	Vehicle Feature Specifications.
featureSpecs[]. label	str	Label for the feature.
featureSpecs []. type	enum	Feature category. <i>Valid values:</i> • ENTERTAINMENT • EXTERIOR • FEATURED_EQUIPMENT • INTERIOR • MECHANICAL • OPTIONS • SAFETY • WARRANTY • DESCRIPTION
featureSpecs []. values[]	array	A string array listing the feature descriptions.
financials	obj	Vehicle price details, these are not used as part of any price calculations.
fuelEconomies[]	array	The vehicle's fuel efficiency details.
fuelEconomies[]. cityValue	str	The economy value for city driving.
fuelEconomies[]. hwyValue	str	The economy value for highway driving.
fuelEconomies[]. type	str	The vehicle's fuel type.
fuelEconomies[]. unit	str	Fuel unit, MPG or KPL.
historyReport	bool	If <code>true</code> , a History report is available for the vehicle.

id	str	The merchandisable vehicle identifier.
importStoreId	str	Store ID of the vehicle's origin.
lastModifiedDate	date	Last-updated timestamp of the vehicle record.
logos[]	array	Logos available for the vehicle.
logos[]. displayImageUrl	str	The logo's image URL.
logos[]. name	str	OneOwner, Certified.
logos[]. targetURL	str	The target URL of the logo.
logos[]. trackingId	str	The logo tracking ID.
lotAge	int	Calculated difference between the lot date to the present date.
lotDate	str	Timestamp when vehicle arrived on dealer's lot.
make	str	Description of the make, franchise, or brand of the vehicle.
marketable	bool	If <code>true</code> , the vehicle is available for marketing.
mathbox	obj	Vehicle prices & incentives and stack details for lease, cash, or finance payment options.
mediaSummary	obj	Vehicle media summary (photo count, video count).
mediaSummary. dealerPhotoCount	int	Total Dealer photos count.
mediaSummary. oemPhotoCount	int	Total OEM photos count.
mediaSummary. totalPhotoCount	int	Total photos count.
mediaSummary. videoCount	int	Videos count.
model	str	Description of the model of the vehicle.
modelCode	str	OEM model code.
odometer	obj	Distance traveled by a vehicle.
odometer. displayValue	str	Number of miles/km as displayed on website.
odometer. units	str	Unit of the odometer measurement: miles I or km.
odometer. unitsAbbreviation	str	Abbreviation for the units. <i>Example: mi</i>
odometer. value	str	Odometer value.
oneOwner	bool	If <code>true</code> , the vehicle has had a single owner.
optionCodes[]	array	A string array of the vehicle's feature option codes.

optionDetails	obj	Collection of dealer-installed and factory options, with full pricing details. See The results.optionDetails Object .
options[]	<i>array</i>	Collection of options with full pricing/details.
originalTrim	str	The actual trim value, as provided by vin decoding.
passengerCapacity	str	The vehicle's seating capacity.
photos	obj	Photos available for the vehicle. See The results.photos Object .
productionNumber	str	Number assigned when the vehicle is in production. . Dealers use this value as a default stock number in their DMS prior to assigning their own stock number.
promotionAvailable	bool	If <i>true</i> , promotions are available for the vehicle.
stockNumber	str	Dealer-assigned stock number for the vehicle.
styleId	str	CDK style ID.
thumbnailPhotoURL	str	Vehicle Thumbnail Photo URL.
transmissionDetails	obj	The transmission details of the vehicle.
transmissionDetails. transmission	str	Vehicle transmission type. <i>Examples:</i> Automatic or Manual
transmissionDetails. transmissionSpeeds	str	Transmission speeds.
transmissionDetails. transmissionText	str	Descriptive free-form text about transmission. <i>Example:</i> 5 Spd Manual
transmissionDetails. transmissionType	str	Normalized enumerated value.
trim	str	Trim configured to display on website. May be an actual trim value, a Chrome vehicle style label, or a dealer-provided value.
vehicleDetailWebUrl	str	URL of the vehicle details page on the CDK website.
vehicleOwner	bool	If <i>true</i> , the web ID passed in the request is the ID of the vehicle owner. If <i>false</i> , the vehicle is displayed on the website but is being "shared" from another dealership.
vehicleStatus	obj	List of Vehicle statuses.
vehicleStatus. displayableInventoryStatus	str	Vehicle displayable status.

vehicleStatus.inventoryStatus	str	Vehicle status.
vehicleUse	str	Vehicle usage.
videos[]	array	Vehicle videos. See The results.videos Object .
vin	str	The <i>vehicle identification number</i> (VIN).
webnum	str	CDK internal identifier
year	int	The model year assigned to the vehicle. This is assigned by the manufacturer and it not necessarily the year of build, but the year of model release.

The results.color Object

Attribute	Type	Description
color.	obj	Vehicle color details.
baseColor	str	Base color of the vehicle.
colorCode	str	The color code of the vehicle's color.
name	str	Name of the vehicle's color.
rgbHexValue	str	The RGB hex code of the vehicle's color.
exterior	obj	Description of the color of the vehicle's exterior. This may include the finish.
exterior. baseColor	str	Base color of the vehicle.
exterior. colorCode	str	The color code of the vehicle's color.
exterior. name	str	Name of the vehicle's color.
exterior. rgbHexValue	str	The RGB code of the vehicle's color.
interior.	obj	Description of the color of the vehicle's interior. This may include the fabric.
interior. baseColor	str	Base color of the vehicle's interior.
interior. colorCode	str	The color code of the vehicle's interior.
interior. name	str	Color name of the vehicle's interior.
interior. rgbHexValue	str	The RGB code of the vehicle's interior color.

The results.dealerInfo Object

Attribute	Type	Description
dealerInfo	obj	Dealer-contact details where this vehicle is available.
dealerCode	str	Code associated with the dealer.
address	obj	Address details.
address.city	str	City.
address.country	str	Country.
address.postalCode	str	Address postal code.
address.region	str	Region of the dealer.
address.state	str	State.
address.street1	str	Street address line 1.
address.street2	str	Street address line 2. Used with Apt, building or unit numbers, etc.
address.coordinates	obj	Dealer location for this vehicle.
address.coordinates.distance	f.2	Distance between the dealer's location and the location of the vehicle.
address.coordinates.lat	f.2	Latitude of the vehicle's location.
address.coordinates.lon	f.2	Longitude of the vehicle's location.
dealer	obj	Dealer's contact details.
dealerPhone.number	str	Dealer's phone number.
dealerPhone.type	str	Type of Dealer's phone number
locationName	str	The name of the dealer's location.
timeZone	str	Time zone of the dealer.
disclaimers	obj	Disclaimer object.
disclaimers.displayableText	str	Disclaimer text.
disclaimers.type	str	Disclaimer type.
displayableOnWebsites	bool	If true, the vehicle can be displayed on websites. If false, the vehicle cannot be displayed on websites.
displayableWebId	str	CDK website identifier where the vehicle is displayed.

The results.displayableWebIdLocale Object

Attribute	Type	Description
results.displayableWebIdLocale	obj	Defines the web-displayable descriptions for the dealership attributes.
country	str	Country of the dealership.
displayCountry	str	Country to display.
displayLanguage	str	Language to display.
displayName	str	Name to display.
displayScript	str	Script run on display.
displayVariant	str	Variant to display.
iso3Country	str	ISO 3-letter country to display.
iso3Language	str	ISO 3-letter language to display.
language	str	Language for the Dealership.
script	str	Script for the dealership.
variant	str	Variant to display.
unicodeLocaleAttributes	array	A string array of the locale attributes.
unicodeLocaleKeys	array	A string array of the locale keys.

The results.engine Object

Attribute	Type	Description
aspiration	str	Vehicle engine aspiration.
cylinders	int	The number of cylinders used by the engine.
description	str	Description of the engine.
fuelType	str	The fuel type of the vehicle.
displacement	obj	The engine displacement.
displacement. unit	str	The unit applied to the displacement.
displacement. value	str	The displacement value of the vehicle engine.
power	obj	The engine power.
power. unit	str	The unit used for value .
power. value	int	Vehicle power value.

The results.optionDetails Object

Attribute	Type	Description
results.optionDetails.	obj	Option details with price information.
dealerInstalledOptions[].	<i>array</i>	Collection of dealer-installed options with full pricing/details
dealerInstalledOptions[]. category	str	category/type code for options
dealerInstalledOptions[]. description	str	Description for dealer installed option
dealerInstalledOptions[]. disclaimer	str	Dealer installed option disclaimer
dealerInstalledOptions[]. id	int	CDK internal identifier for dealer installed option. Not returned for factory options.
dealerInstalledOptions[]. longTitle	str	Long title for dealer installed option
dealerInstalledOptions[]. manufacturer	str	Manufacturer name
dealerInstalledOptions[]. marketingDescription	str	Marketing description for dealer installed option
dealerInstalledOptions[]. optionCode	str	Option code. Corresponds to the option code from the CDK Drive DMS.
dealerInstalledOptions[]. package	bool	Indicates if the option is a package or a single option.
dealerInstalledOptions[]. packageOptions[]	<i>array</i>	A string list of child option codes included in the package. This is not returned when package is false
dealerInstalledOptions[]. partNumber	str	Longer manufacturer part number for dealer installed options. Not returned for factory options.
dealerInstalledOptions[]. quantity	int	Number of items in option (e.g. 4 floor mats)
dealerInstalledOptions[]. shortTitle	str	Short title for dealer installed option
dealerInstalledOptions[]. prices[]	<i>array</i>	Collection of prices for dealer installed options.
dealerInstalledOptions[].prices[]. amount	f.2	Price value
dealerInstalledOptions[].prices[]. currencyCode	str	Unit of currency.
dealerInstalledOptions[].prices[]. dataSourceField	str	Source of the price.
dealerInstalledOptions[].prices[]. type	str	Price types: MSRP, Retail, Invoice, Featured
factoryOptions[]	<i>array</i>	Collection of factory options with full pricing/details
factoryOptions[]. category	str	category/type code for options
factoryOptions[]. description	str	Description for factory option.
factoryOptions[]. disclaimer	str	Factory option disclaimer
factoryOptions[]. id	int	CDK internal identifier for dealer installed option. Not returned for factory options.

factoryOptions[]. longTitle	str	Long title for factory option
factoryOptions[]. manufacturer	str	Manufacturer name
factoryOptions[]. marketingDescription	str	Marketing description for factory option
factoryOptions[]. optionCode	str	Option code.
factoryOptions[]. package	bool	Indicates if the option is a package or a single option.
factoryOptions[]. packageOptions[]	array	A string list of child option codes included in the package. This is not returned when package is false
factoryOptions[]. partNumber	str	Longer manufacturer part number for dealer installed options. Not returned for factory options.
factoryOptions[]. quantity	int	Number of items in option (e.g. 4 floor mats)
factoryOptions[]. shortTitle	str	Short title for factory option
factoryOptions[]. prices[]	array	A list of prices for factory options.
factoryOptions[].prices[]. amount	f.2	Price value
factoryOptions[].prices[]. currencyCode	str	Unit of currency.
factoryOptions[].prices[]. dataSourceField	str	Source of the price.
factoryOptions[].prices[]. type	str	Price types: MSRP, Retail, Invoice, Featured

The results.photos Object

Attribute	Type	Description
results.photos	obj	The photos associated with the vehicle.
dealer[]	array	A list of Dealer photos.
dealer[]. assetType	str	Asset type.
dealer[]. category	str	Category of media.
dealer[]. type	str	Type of media.
dealer[]. urls	array	String list of media URLs.
mainPhoto	obj	Main photo for vehicle.
mainPhoto. path	str	Path or URL to access the media.
mainPhoto. title	str	Title for this media.
oem[]	array	A list of OEM photos.
oem[]. assetType	str	Asset type.
oem[]. category	str	Category of media.
oem[]. type	str	Type of media.
oem[]. urls	array	String list of media URLs.

The results.videos Object

Attribute	Type	Description
description	str	Description of the media.
duration	str	Media duration. <i>Example: Duration: Up to 1 minute.</i>
mediald	str	ID to track the media.
provider	str	Video provider.
url	str	Path or URL to access the media.
attributes[]	array	Media attributes.
attributes[]. key	str	Vehicle attribute key.
attributes[]. value	str	Vehicle attribute value.

The summary Object

Attribute	Type	Description
count	int	Total number of vehicles available for the given search criteria.
limit	int	Number of vehicles requested per response page.
offset	int	Response page begins with the record specified by the offset.
totalCount	int	Total number of vehicles available in inventory.

Tip: The [Merchandisable Vehicle Record Schema](#) offers a reference to all the attributes in a merchandisable vehicle record. Descriptions for all attributes can be found in the specification and on the *Specifications* tab of the [CDK Drive Get Merchandisable Vehicles](#) page.

Merchandisable Vehicle Record Schema

The schema below contains the complete set of objects and attributes returned by `GET /`. The payload returned depends on the query parameters provided and may not contain all the attributes outlined in the scheme below.

Tip: Copy the schema into a code editor that lets you collapse the JSON objects.
