

Field Mapping Guide: CDK Drive Get Merchandisable Vehicles

CDK Drive Get Merchandisable Vehicles v2 implements many of the attributes used by its respective PIP API, *Inventory Vehicle Extract* and this guide outlines the fields that map from from the legacy PIP API to the new Modern API.

Arrays in the Record

CDK Drive Get Merchandisable Vehicles v2 is different from its PIP counterpart in that it uses several arrays, such as **featureOptions[]** and **featureSpecs[]**, to describe the details of a vehicle. You can see this in the **featureSpecs[]** example below.

FEATURESPECS ARRAY

```
// featureSpecs Schema
"featureSpecs": [
  {
    "label": "str",
    "type": "enum"
    "values": [ "string array" ]
  }
]

// featureSpecs example
"featureSpecs": [
  {
    "type": "ENTERTAINMENT",
    "label": "Entertainment",
    "values": [
      "AM/FM Stereo",
      "Antenna, roof-mounted",
      "Audio system feature, 4-speaker system",
      "Auxiliary Audio Input",
      ...
      "Smart Device Integration"
    ]
  }
]
```

See the *Developer Guide* for an example that shows the arrays and attributes in action.

The Mapping Table

The mapping table lists the supported fields from *Inventory Vehicle Extract* on the left and the corresponding fields in the *CDK Drive Get Merchandisable Vehicles v2* on the right.

Tip: All listed Merchandisable Vehicle attributes are contained in the `results[]` array. For more details, see the schema diagram in the *Developer Guide*.

Merchandisable Vehicle Record Mapping Table

Inventory Vehicle Field	Merchandisable Vehicle Attribute
results[]	The results array contains a list of merchandisable vehicle objects, arrays, and attributes.
AccountingAccount	financials. accountingAccount
